

Gustavo Aguiar, M.Sc.

SENIOR DATA SCIENTIST · MACHINE LEARNING ENGINEER · AI SPECIALIST

Rio de Janeiro, Brazil

☎ (+55) 22 99278-4262 | ✉ gustavoj.m.aguiar@outlook.com | 📞 gusaguiar | 📧 gjmaguiar | 🌐 Lattes: lattes.cnpq.br/1848857688296947 | ResearchGate: researchgate.net/profile/Gustavo_Aguiar4

"You bought the idea and this product makes my eyes shine! I could feel that you really believed it wouldn't just be work, but that there was purpose!"

- Heyde Lemos, Client, Deputy Secretary of State for Administration

"Others promised to deliver this automation and never managed to achieve the result; you went there and did it!"

- Rodrigo Lemos Santos, Legal & CA Director, AB-InBev (Ambev)

About

Senior Data Scientist & ML Engineer focused on **transforming data into products that have real impacts, especially in business process agility gains**. I work from planning and designing solutions for projects to developing products in data science and machine learning engineering, as well as mentoring professionals in this area. I am a solution developer with a very business process-oriented perspective, always seeking to understand what the client needs and how it's possible to help.

Some of my experiences include:

- **Ambev Tech:** I delivered intelligent agents for the Legal department using Python, LLMs (GPT-4o/GPT-4o-mini), and OCR with Tesseract, including custom pre-processing for legal documents. The solutions were integrated into the internal Asimov Foundation framework on Azure, orchestrated via Azure Service Bus, and exposed as versioned REST APIs with observability, CI/CD, and data governance using PostgreSQL and Azure Blob Storage.
- **State Government - GovTech | SEGER, SESA, SEDU, SEJUS, SESP, SECONT, Civil Police (ES) & SEPOL, DETRAN (RJ):** Due to management's trust, I was able to act as Solution Architect for many GovTech projects, architected complete Data Lakehouses using Cloudera Data Platform (HDFS/Impala/Ranger/Kerberos) + PySpark + Airflow. I built automated ETL pipelines in all layers (Bronze, Silver, Gold), implemented AI models for anomaly detection in public prices, automatic document classification, entity extraction via NER and demand forecasting. I guided CI/CD practices, versioning and MLOps for operationalizing ML models in production, and delivered RAG-based AI agents for procurement and legal advisory units within the State Administration Secretariat. Additionally, I participated in the development of more than 50 data products, such as intelligence dashboards and robots for task automation.
- **Eletrobrás Group | Furnas, Chesf, Eletrosul, Eletronorte, Eletrobras Holding:** I designed and developed an integrated legal Data Mart in SAS Viya with analytical dashboards for legal intelligence. I built predictive models for projecting legal process volume, closure detection via NLP and content-based textual classification. I implemented a hybrid SAS Compute + PySpark architecture for distributed processing of large document volumes and automated ML model deployment.
- **Court of Accounts:** I developed crawlers for automated collection of official gazettes (municipalities and state), implemented NLP models with NER for entity extraction in bidding notices and contract extracts, structured data in PostgreSQL and fed SAS Visual Investigator (ElasticSearch + CAS) as an investigative platform for auditors, including alert rules for detecting fraud indicators in bidding processes.
- **Oil & Gas | Petrobras & Constellation:** I developed a high-fidelity Digital Twin simulator for Blowout Preventer equipment using Matlab/Simulink with specialized toolboxes (Curve Fitting, Optimization, Simscape). I built the "BOP Data Universe" BI environment integrating multiple data sources, implemented text mining in failure records via NLTK/Scikit-Learn, and created a preventive alert system based on CBM (Condition-Based Maintenance) with clustering and predictive models for IoT/sensor analysis. Finally, I worked on a Digital Twin project for Petrobras' Intelligent Completion System.

Main stack: SAS Viya, Cloudera Data Platform (HDFS, Impala, Spark, Ranger, Kerberos), PySpark, Airflow, MLflow, FastAPI, Docker/Kubernetes (Rancher and OpenShift), AWS, Python (Scikit-Learn, PyTorch, TensorFlow, Keras, Numpy), Node/React, SLM/LLM/GenAI, Computer Vision, NLP (spaCy, NLTK, Embeddings, Vectors Database, Transformers), Power BI, SAS Visual Analytics.

Professional Experience

Vert Analytics

Brasília, DF, Brazil

SPECIALIST DATA SCIENTIST

Jan. 2025 - Present

- Data and AI solution architect for multiple Espírito Santo state contracts, leading end-to-end design for scalable, production-ready analytics and ML initiatives.
- Architected lakehouse and ML solutions using the Cloudera Data Platform with PySpark and Airflow, ensuring reliable pipelines across Bronze/Silver/Gold layers.
- Drove AI deliverables aligned to prior GovTech work, including RAG agents and domain-specific models for public-sector operations.
- Deployed analytics and AI services on Kubernetes (Rancher and OpenShift).

Vert Analytics

Brasília, DF, Brazil

SENIOR DATA SCIENTIST

Jul. 2022 - Dec. 2024

- GovTech Solution Architect for multiple projects: SEGER, SESA, SEDU, SEJUS, SESP, SECONT, Civil Police (ES) and SEPOL, DETRAN (RJ)
- Architecture of complete Data Lakehouses using Cloudera Data Platform (HDFS/Impala/Ranger/Kerberos) + PySpark + Airflow with automated ETL pipelines in all layers (Bronze, Silver, Gold) and deployments on Kubernetes (Rancher and OpenShift)
- Implementation of AI models for anomaly detection in public prices, automatic document classification, entity extraction via NER and demand forecasting
- Built a network investigation and analysis tool to identify fraud indicators in fleet fueling and maintenance operations for the state
- Developed water and energy consumption forecasting models for state agencies
- Delivered a RAG-based AI agent for the State Administration Secretariat procurement area, guiding procedures for agreements and available services
- Delivered a RAG-based AI agent for the State Administration Secretariat legal advisory unit to support drafting technical opinions
- Built an AI agent for querying structured data curated in the State Health Secretariat Data Lake
- Implemented a PDF-to-string processing module using Fitz and TesseractOCR
- Design and development of integrated legal Data Mart in SAS Viya with analytical dashboards for legal intelligence at Eletrobrás Group (Furnas, Chesf, Eletrosul, Eletronorte, Eletrobras Holding)
- Building predictive models for projecting legal process volume, probability of unfavorable outcome, closure detection via NLP and content-based textual classification
- Implementation of hybrid SAS Compute + PySpark architecture for distributed processing of large data volumes
- Guidance on CI/CD practices, versioning and MLOps for operationalizing ML models in production
- Development of more than 50 data products, including intelligence dashboards, task automation robots and ML models

Ambev Tech

São Paulo, Brazil

ARTIFICIAL INTELLIGENCE CONSULTANT

Aug. 2025 - Jan. 2026

- Development of intelligent agents for Ambev's Legal department using Python with clean-code standards, continuous linting with Ruff, and quality analysis with SonarQube
- Implementation of CI/CD pipelines in Azure DevOps, leveraging Git version control, automated testing, static validation, and deployments across dev/stg/prod
- Construction of agents powered by OpenAI LLMs (GPT-4o and GPT-4o-mini), integrated into Ambev Tech's internal framework, Asimov Foundation, on Azure cloud
- Advanced OCR development with TesseractOCR, using custom whitelists, languages, PSM modes, sharpening, and noise reduction for legal documents
- Structured metadata storage in PostgreSQL and extraction outputs saved as JSON in Azure Blob Storage for traceability and governance
- Use of Azure Service Bus for asynchronous workflow orchestration and message-based processing across agent components
- Exposure of agents as high-performance REST APIs with observability standards and versioning across dev/stg/prod
- Continuous monitoring of services, logs, and metrics with DataDog, including alerting, dashboards, distributed tracing, and production error tracking

Vert Analytics

Brasília, DF, Brazil

DATA SCIENTIST

Feb. 2022 - Jun. 2022

- Development of crawlers for automated collection of official documents (municipalities and state) for the Court of Accounts
- Implementation of NLP models with NER for entity extraction in bidding notices and contract extracts
- Data structuring in PostgreSQL and feeding SAS Visual Investigator (ElasticSearch + CAS) as investigative platform for auditors
- Implementation of alert rules for detecting fraud indicators in bidding processes
- Building dashboards for clear data visualization and decision support during audits

Petrobras

Rio de Janeiro, Brazil

MASTER RESEARCHER FELLOW

Jun. 2023 - Mar. 2024

- Development of Digital Twin for Petrobras' Intelligent Completion System using Python, PySpark, Airflow, MongoDB and Docker
- Integration of Open Source technologies with Matlab/Simulink for building high-fidelity virtual physical model
- Project managed by Petrobras (Cenpes) under coordination of D.Sc. Eng. Danilo Colombo, applying industrial sensor monitoring concepts
- Implementation of hybrid architecture combining traditional engineering tools with modern data and ML technologies
- Unfortunately I had to leave the project during development due to the end of my master's degree.

Lab of Advanced Studies in Responsive Operations and Optimization

Rio de Janeiro, Brazil

DATA SCIENTIST

Dec. 2020 - Mar. 2023

- Development of high-fidelity Digital Twin simulator for Blowout Preventer equipment using Matlab/Simulink with specialized toolboxes (Curve Fitting, Optimization, Simscape)
- Building the "BOP Data Universe" BI environment integrating multiple data sources from partner companies Petrobras, Constellation and Transocean
- Implementation of text mining in failure records via NLTK/Scikit-Learn for analysis of maintenance patterns and failure modes
- Creation of preventive alert system based on CBM (Condition-Based Maintenance) with clustering for IoT/sensor analysis. Module in Intelie Live (RTO Live)
- Development of intelligence reports on expected behavior (from simulations using validated Digital Twin) in various types of failures, using Power BI, Matlab/Simulink, Python and Big Data

Lab of Advanced Studies in Responsive Operations and Optimization

Rio de Janeiro, Brazil

JUNIOR DATA SCIENTIST

Sep. 2018 - Dec. 2020

- Text mining in Blowout Preventer equipment failure records using NLTK and Scikit-Learn to improve understanding of maintenance activities
- Exploratory data analysis (EDA) with Python, Excel, Jupyter Notebook and Power BI for identifying failure patterns in Gulf of Mexico vs Brazil vs North Sea
- Processing and cleaning of operational failure data for building knowledge base on critical equipment
- Development of survival analysis for useful life (in time or operation cycles) of various Blowout Preventer components

Lab of Innovative Enterprises

Rio de Janeiro, Brazil

DATA ANALYST

Jan. 2019 - Jun. 2020

- Collection and processing of interview data with ANTT directors and main stakeholder representatives using Python
- Conducting structured interviews with superintendents and managers to map decision-making flows and organizational responsibilities
- Processing and organizing qualitative and quantitative data for building ANTT's new 2020-2030 strategic plan
- Development of intelligence dashboards for monitoring strategic indicators and agency goals using Power BI, Python, SQL and Excel
- Building KPIs and visuals for monitoring strategic projects, facilitating data-driven decision making with batch updates via built data engineering pipelines
- Building ANTT's new 2020-2030 strategic plan

Carlos Chagas Filho Foundation for Research Support of the State of Rio de Janeiro (FAPERJ)

Rio de Janeiro, Brazil

RESEARCH FELLOW

May 2017 - May 2018

- Study of Fourier Analysis as a tool for solving Partial Differential Equations (PDEs)
- Application of theory in solving main PDE models: heat, wave equations and Laplace equation
- Solution of Black-Scholes equation for option pricing in European market

Education

University of São Paulo

São Paulo, Brazil

MASTER OF BUSINESS ADMINISTRATION (MBA) - DATA SCIENCE & ANALYTICS

Jun. 2025 - Dec. 2026

- Applied training in Data Science & Analytics with three integrated fronts: ML Engineering, Data Science and Data Engineering
- End-to-end pipelines with MLOps, versioning, CI/CD, Docker, Kubernetes, REST APIs and microservices in AWS/GCP/Azure
- Advanced EDA with pandas/NumPy, inferential statistics, regression, classification, clustering, NLP, time series
- Data Lakehouse and DW architectures, distributed processing with Spark, Hadoop and Kafka

Federal University of Fluminense

Rio de Janeiro, Brazil

MASTER'S IN COMPUTER SYSTEMS

Apr. 2021 - Apr. 2024

Udacity

California, United States

MACHINE LEARNING ENGINEERING SPECIALIZATION - AWS

Oct. 2022 - Feb. 2023

- Data analysis and feature engineering using Data Wrangler and Pandas in SageMaker Studio
- Model design, training, evaluation, and hyperparameter tuning for regression and classification (supervised learning)
- Training, testing, and optimizing models as linear, tree-based, XGBoost, and AutoGluon Tabular prediction models
- Deploying models as endpoints for inference on live data
- Evaluating datasets with batch transform jobs and performing custom processing jobs on raw data
- Building and training neural networks on image and text classification tasks. Fine-tuning pretrained models (ResNet, MXNet, and BERT)
- Debugging and profiling training jobs using SageMaker Debugger and packaging models in Dockerfiles for deployment
- Utilizing AWS services like Lambda, Step Functions, Model Monitor, and Feature Store to create end-to-end ML pipelines
- Technologies: SageMaker, S3, IAM, Lambda, Step Functions, EC2, CloudWatch

Udacity

California, United States

DATA SCIENCE SPECIALIZATION

Sep. 2021 - Jan. 2022

- Supervised ML: regression/classification algorithms, decision trees, random forests, neural networks with scikit-learn
- Software Engineering: OOP Python, unit testing, virtual environments, Python packaging, linting, GitHub actions
- Data Science Pipelines: PyTorch, CNNs, NLP with tokenization/stemming/lemmatization, OpenCV for computer vision
- Unsupervised ML: K-means clustering, PCA, recommendation systems, matrix factorization, hierarchical clustering
- Projects: text classification model development with web dashboard, ML pipeline with text/numeric data, recommendation system

Federal University of Fluminense

Rio de Janeiro, Brazil

BACHELOR'S IN PRODUCTION ENGINEERING

2015 - 2020

Evaluations & Recommendations

All evaluations are available on LinkedIn profile

Fabio Ferreira - Vert Analytics

2025

DATA ARCHITECT

"Gustavo is one of the most brilliant professionals I have worked with. He is proactive under pressure, consistently seeks optimized solutions, applies high industry standards, and shows master-level command of his tech stack."

Luciana Miranda - Vert Analytics

2025

PROJECT MANAGER

"Gustavo is a highly qualified and strategic professional, recognized for organization, commitment, and dedication. We worked on high-impact projects for Eletrobras and Espírito Santo state agencies, where he demonstrated strong analytical architecture expertise and leadership of multidisciplinary teams, consistently delivering innovative, high-quality results."

Arthur Diego Pereira - Vert Analytics

2025

BUSINESS INTELLIGENCE SPECIALIST

"I worked with Gustavo on the State Transparency and Oversight Secretariat Data Catalog (SECONT), building a custom SAS Viya solution. He quickly mastered complex flows, communicated clearly, and consistently delivered well-thought-out solutions. I strongly recommend him for SAS-based analytics initiatives."

Matheus Cougo - Vert Analytics

2025

SENIOR UX/UI DESIGNER & PRODUCT DESIGNER

"Working on a project with Gustavo means having a partner who combines technical depth, architectural vision, and focus on real impact. In all the projects we worked on together, he was central to building the data backbone. We worked to enhance the "SAS 360" product, which is his creation. This product is responsible for providing extremely useful and effective auditing to clients who use SAS Viya microservices and has already become an indispensable tool in everyone's work routine. In the "Data Lake Observability" project, it was impressive to see how Gustavo integrated various sources into resilient pipelines that gave us a solid foundation to create truly useful visualization experiences within our contracts. We also collaborated on the creation of "CIGEPES-ES" (Central de Informações e Dados de Gestão de Pessoas), where he led the engineering behind sensitive payroll and benefits data, with absolute mastery of integrations between SAS Viya and other platforms, in addition to actively contributing to solution design. Beyond these specific projects, Gustavo is involved in various other products developed for the Government of Espírito Santo State and its Secretariats, such as AI models, dashboards, and reports. Always bringing the most solid technical knowledge and making it very clear to stakeholders the real value of the built solution. Gustavo is one of those professionals who, in addition to delivering, shares. He acts as a technical reference for the team, guiding with clarity. I highly recommend Gustavo because I know how much he contributes to elevating the technical and strategic level of any project."

Wyllton Maciel - Vert Analytics

2025

SENIOR DATA ENGINEER

"Working alongside Gustavo at Vert Analytics has been an amazing experience, both professionally and personally. Together, we built a robust data engineering ecosystem for several departments of the Government of Espírito Santo (SEDU, SESA, and SEGER). Gustavo showcased expertise with technologies like PySpark, Airflow, HDFS, and Impala, and SAS Viya leveraging the potential of the Cloudera Data Platform (CDP). Gustavo played a crucial role in delivering solutions that directly supported analytical environments in SAS Viya and various applications running on Kubernetes. As a data scientist, he became the bridge between the CDP Data Lakehouse and these analytic layers, orchestrating seamless data flows that powered Viya models and containerized services alike. Gustavo stood out for his collaborative approach, clear communication, and his constant willingness to help others. Working with him made our daily routine easier and more productive, and above all, strengthened our friendship and teamwork."

Vanessa Silva - Vert Analytics

2025

TECH RECRUITER

"I had the pleasure of participating in Gustavo's selection process. He always helped me technically, whether with questions or selection processes. Attentive, polite, didactic, helpful. Being a reference for other collaborators within Vert. It was great working with a professional like you!"

Atilas Rodrigues Lamberti - Vert Analytics

2024

DATA ANALYST

"Gustavo is a highly competent and dedicated professional, always willing to help colleagues. On several occasions, he was fundamental to the success of my activities, whether sharing his technical knowledge clearly or helping solve complex problems with innovative approaches. Gustavo has an impressive mastery of data science, in addition to being proactive and collaborative."

Thiago Warton Teixeira Monteiro - Vert Analytics

2024

BI ANALYST

"Working with Gustavo over these almost two years has been an extremely valuable experience. He has always shown himself to be an essential technical support, being available and willing to clarify any questions I had. The didactic way in which Gustavo shares his knowledge makes even the most complex concepts more accessible and applicable in everyday life."

Bernardo Guimarães - Vert Analytics

2024

DELIVERY MANAGER

"Gustavo is a very talented professional with whom I had the opportunity to work at Vert Analytics. During this period, I was able to witness his ability to develop innovative and strategic solutions in complex projects. In addition to his recognized technical competence, he stands out for his ease in transmitting advanced concepts in a comprehensible way for the team and the client."

Luíza Angelo Lovo - Vert Analytics

2023

COMPUTER ENGINEER

"It is a privilege to recommend Gustavo as a highly competent professional in all areas in which he works. He is a natural leader, capable of guiding teams efficiently, providing support with all his knowledge and ensuring that all team members are aligned with project objectives. Additionally, he is a SAS specialist, mastering these essential tools for data analysis."

Jefferson Silveira - Vert Analytics

2023

BUSINESS INTELLIGENCE & ANALYTICS

"It is a privilege to work alongside Gustavo as a team colleague. As a data scientist, he stands out exceptionally in his area of expertise. Gustavo is undoubtedly a reference in our team and is seen by everyone as a natural leader. His technical competence is remarkable, and he constantly demonstrates his intelligence and ability to solve complex problems."

Giovanni Sencioles - Vert Analytics

2023

DATA SCIENTIST

"Gustavo is not only a reference in the data science field, but also an excellent colleague. Always proposing new ideas to facilitate the workflow of other colleagues, helping them with very well-elaborated and explanatory documentation. Always very attentive to every detail, he was responsible for monitoring the health of project inputs."

Matheus Melotti - Vert Analytics

2023

SENIOR DATA SCIENTIST

"I had the pleasure of working with Gustavo, who served as Senior Data Scientist on our team during the Eletrobrás project, and it was an incredibly valuable experience. During this period, his expertise in artificial intelligence not only accelerated our projects but also transformed the way we approach business challenges. In addition to having the ability to communicate complex concepts in a comprehensible way for non-technical people."

Volunteer Work & Extracurricular Activities

Production Engineering Academic Center - UFF

Rio de Janeiro, Brazil

VICE-DIRECTOR

Mar. 2018 - Mar. 2019

- Led student initiatives focused on academic and professional development of students
- Organized academic events including the II Engineering Week and Science under Tents project
- Promoted scientific literacy for children through playful, creative, and interactive activities

Institute of Science and Technology - UFF

Rio de Janeiro, Brazil

ACADEMIC COMMITTEE MEMBER

2018 - 2019

- Member of the Evaluation Committee for nomination to the VII Teaching Excellence Award
- Member of the Electoral Commission for Director and Vice-Director of the Institute of Science and Technology
